

The Power of We™

IP Office Messaging

Powerful and Effective Messaging Applications

Overview

IP Office Messaging applications do much more than simply answer calls when employees aren't at their desks. Messaging applications help ensure businesses effectively interact with customers and colleagues to keep operations running smoothly.

Easy to use and administer, yet offering sophisticated "big business" capabilities, IP Office Messaging includes applications for voicemail, e-mail, unified messaging, interactive voice response and distributed and networked messaging. IP Office Messaging helps keep operations running smoothly by helping businesses communicate with speed and efficiency.

Capabilities

Automated Attendant - Free up staff with automated, customizable caller greetings. Easily provide answers to frequently asked questions. IP Office automated attendants improve efficiency and customer service, and can be customized to handle calls differently, at different times of day.

Voicemail - Sophisticated voicemail capabilities help make employees more productive and speed decision-making. Send a voice message to one or all employees quickly and easily. Accurately address messages by name or extension. With Preferred and Server Editions, IP Office voicemail can

automatically "find" you when you're out of the office to alert you of new messages.

Voicemail to E-mail presentation —

Access voicemail and e-mail in one mailbox and see all your messages together. Receive voicemail messages attached to an e-mail and access them remotely on your PC without having to dial into the phone system. Save and forward voice messages just like e-mail. With IP Office Preferred and Server Editions, users can hear e-mails read over the phone and reply to them while on the move.

Unified Messaging - IP Office Preferred and Server Editions enhances built-in voicemail to email capability by adding synchronization, helping to keep mailboxes up to date. Delete a voicemail message from your email Inbox and it is simultaneously deleted from the voicemail box. The reverse is also true. Additionally, Preferred Edition provides the ability to access voicemail messages through a web-based browser without dialing into the mailbox from a telephone.

Distributed Voice Messaging - For businesses with more than one location, distributed voice messaging can help improve business continuity. Systems can automatically back up messages, and even take over should another one fail. Administrators can easily manage all messaging systems from a central location.

Benefits

- **Improve access for customers** – Important customer calls to the right person, extension or department, every time.
- **Increase efficiency and productivity** – Handle calls quickly during peak calling periods and streamline call routing. Screen calls so users can see who is calling without interrupting important tasks.
- **Serve customers at their convenience** – Automated attendants enable customers to interact with your business anytime, even “after hours”.
- **Protect your investment as business grows** – Start basic and expand with additional capacity and applications when and if you need them.
- **Business continuity** – All messages can still be placed and received even in the event of an outage.

About Avaya
